PERSONAL PROFILE

I am a freelance software developer with some years of experience in the full stack .NET ecosystem. I have a strong focus on front-end web development, and want to further pursue this road.

My goal is to help companies build nice and intuitive user interfaces, setup/maintain/improve the code infrastructure, while also coaching in the process. UI and UX are subjects that interest me a lot, which helps me be a better front-end developer and reach that goal.

I always look for opportunities to learn new things and I am aware of the latest and most modern technologies. Sharing that knowledge is something I find extremely important, and it is something I really enjoy.

Apart from web development, I have a personal interest in mobile development, as well as in machine learning and AI related topics.

WORK EXPERIENCE

2018 - 2018:   **Internship**
Infohos Services
Machine Learning in healthcare sector (research)

2018 - present: **Full Stack .NET Web Developer**
